

# 062C

## Electronic programmable thermostatic head

Electronic programmable weekly thermostat for radiators control. Regulates the flow of hot water according with the settled room temperature and to the programs; allows to adapt the thermal comfort requirements in order to meet user's needs and to obtain a significant saving in heating costs.

	COMFORT temperature regulation range	ECONOMY temperature regulation range	Power supply	Operating temperature	Protection degree
062C	8 ÷ 28 °C	8 ÷ 28 °C	2 batteries AA 1,5 V	0 ÷ 50°C	IP30

## FEATURES

Power: 2 x 1.5 V AA batteries (AA)

Adjustment: PID type with a response time of less than three minutes.

Standard connection M30 x 1.5 other several adapters are available for any types of valves.

Micro-connector for the 063P programmer connection

Programmable via local menu or by programmer 063P

Storage temperature -20 up to 70°C

Made of white ABS

## HOMOLOGATION AND STANDARDS

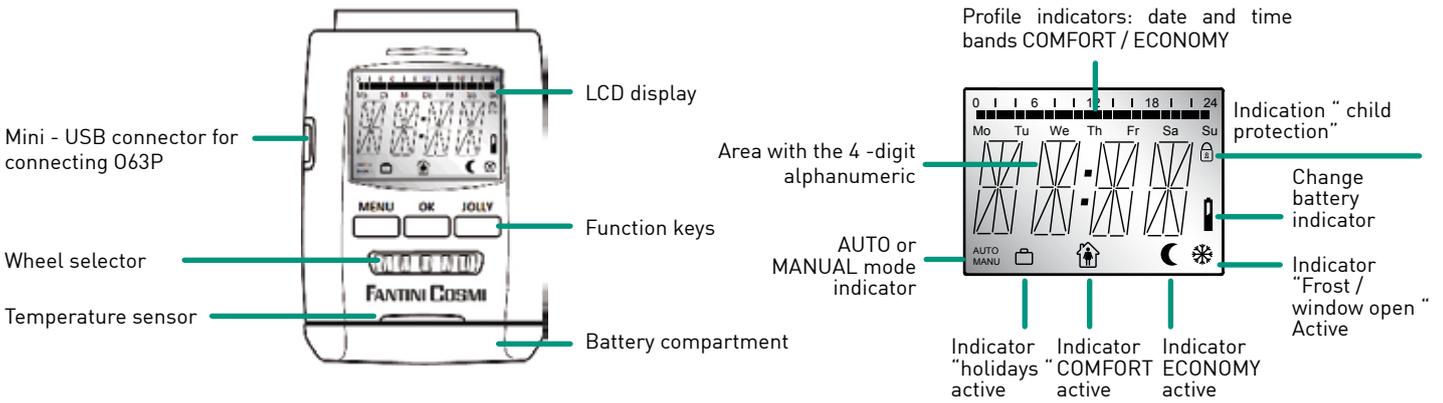

Complies with 2004/108/CE.

## INSTALLATION

The electronic programmable thermostatic head is snap installed on all radiator valves with connection M 30x1.5

For a better temperature control, it should be installed with the display facing up.

# OPERATION

## OPERATION AUTOMATIC OR MANUAL

In manual mode, O62C regulates the temperature set by the user through the selector wheel, in AUTOMATIC mode adjusts the temperature according to COMFORT (Tmax regime) or ECONOMY (Tmin) defined in the relevant time band.

## SET-POINTS TEMPERATURE

3 different set-points temperature: COMFORT, ECONOMY and FROST

## WEEKLY PROGRAMMING

with 4 daily activation bands. It is possible to define a maximum of 4 daily commutation in COMFORT (Tmax) and 4 in ECONOMY (Tmin) for each of the seven days of the week, or for other grouping days.

## JOLLY FUNCTION

With O62C is possible at any moment to exclude the automatic program for an interval time from 1 hour to 24 hours.

## OFFSET FUNCTION SETTING

It is possible that shelves, curtains et c. near the radiator, impede the propagation of heat, influencing the detection of the ambient temperature by the thermostat and the consequent adjustment. If the ambient temperature differs significantly from the temperature set on the programmable thermostat, it is possible to enter a OFFSET correction factor

## FUNCTION OPEN WINDOW

When the window is open, with the consequent sudden drop in temperature, O62C closes the valve for a set time to save power; during this time, the display shows the symbol of the anti-freeze system

## LOCK FUNCTION KEYBOARD ( CHILD SAFETY )

This feature disables the buttons and the rotary wheel , to prevent menu access by unauthorized persons.

## HOLIDAY FUNCTION

In the event of prolonged absences , you can set the date and time of return and the temperature you want to set for that period of absence (or even closure of the valve)

## FUNCTION OF AUTOMATIC WEEKLY ANTI CALCAREOUS

Once a week (Friday) , O62C performs a cycle of opening and closing valve to prevent the phenomenon of calcification

## HEATING INTERRUPTION (CLOSING THE VALVE)

If necessary, you can close the valve to turn off the heating of the room

# PROGRAMMER

The programmable thermostat can be programmed directly via the programmer O63P ( hereinafter referred to as " key O64P ") that allows quick and easy configuration of the programmable thermostat via data exchange by the Mini - USB connector.

The O63P key, allows to program easily through the graphical interface on the PC daily time slots of COMFORT temperature ( Tmax ) and ECONOMY ( Tmin ).

The temperature profiles of the different environments, once saved on the key O63P, can be downloaded to the programmable thermostat O62C that, on that occasion, automatically acquires current time and date, thus making it unnecessary to be pre - set during installation .
